

**CritterRidder**

**Critter Ridder Plumbing Integrity Test Addendum**

Rodents can enter structures through uncapped, compromised or rusted plumbing lines in both pier and beam and monolithic slab structures. There is no way to determine if the plumbing is compromised without performing a “smoke test.” Critter Ridder requires this test on ALL pier and beam structures PRIOR to first appointment. The Company MAY require this test on slab structures if control of wildlife is not obtained after 45 days of completed work.

Per state laws, a licensed plumber must perform the test and the results must be forwarded to Critter Ridder prior to work being performed. Customer also agrees to remedy any problems revealed by the test, have a follow up smoke test performed and forward an itemized receipt showing proof of repairs to Critter Ridder prior to first appointment. Failure to do so will void warranty.

The Customer is responsible for all costs to perform the smoke test(s) and any costs related to repairing any issues revealed by the test.

This agreement submits to the jurisdiction of State Courts of Travis County, Texas.

The Parties are bound by the written terms hereof and not any terms agreed to outside of this agreement. All future changes hereto must be mutually agreed upon and made as a written addendum to this written agreement.
